

Evans Freeman Oshoakpeme

Product Designer

Nigeria | (+234)9078327070 | ev.oshoakpeme@gmail.com | <https://evansoshoakpeme.vercel.app>

Product designer with a user-first mindset and a strong eye for detail. I turn ideas into clear, functional, interfaces through user research, wireframing, prototyping, and usability testing. Experienced in designing equity-focused experiences, including a maternal health app for Nigerian mothers, using Figma and design thinking to solve real user problems. Eager to collaborate with product teams and grow through feedback.

CORE SKILLS

Figma

Prototyping and Wireframing

UX research and Usability Testing

Information Architecture

Responsive Design

HTML/CSS/JS Basics

EXPERIENCE

Mombee (In Development) - Product Designer

August 2026 - Present

- I utilized Claude AI to analyze Nigerian national immunization schedules (NPI) and localized maternal health barriers, embedding compliance and cultural sensitivity directly into the feature requirements.
- I engineered a comprehensive component library in Figma using auto-layout and variants, optimizing for high-contrast visibility to accommodate outdoor usage and low-tier smartphone screens.
- I designed an offline-first mobile architecture, mapping user flows that allow mothers to log health data, view prenatal tips, and track appointments completely offline, with background syncing once network connectivity is restored.

Gilah Global Limited - Visual Designer & Manual Tester

Oct 2021 - May 2023

- I conducted rigorous manual UI testing to ensure deployed products precisely matched design specifications and delivered an optimal user experience.
- I collaborated closely with cross-functional teams, including product managers and designers, to conduct design reviews and guarantee alignment with established user journeys.
- I executed targeted user research and designed impactful visual assets, directly contributing to a 10% increase in the product's conversion rate.

EDUCATION

National Open University of Nigeria - BSc Mathematics and Computer Science 2027

I designed and implemented a Passwordless Authentication module for my final research project. The project explored how passwordless authentication improves overall user experience, its current usage, and how well my implementation improves usage.

National Institute of Information Technology - Certification in Creative Publication 2018

I learnt of and implemented design principles in various projects including brand identity design, editorial design, and visual design.
